SUBJECT DETAILS:

GML = General Mass Limits	CML = Concessional Mass Limits	HML = Higher Mass Limits
----------------------------------	---------------------------------------	---------------------------------

Communicate key points for the management of overloaded vehicles for the 16/17 harvest and the variances between the different states. This is a fact sheet only and the reference documents must be referred to for the detailed information.

It is our intention to have policies and procedures in place to deter transport operators from overloading heavy vehicles.

In NSW we will operate under the New South Wales Grain Harvest Management Scheme. Not all vehicles are eligible for this scheme. Eligible vehicles and their weight limits are available on the RMS website at <http://www.rms.nsw.gov.au/business-industry/heavy-vehicles/grain-transport.html> and as an attachment to this fact sheet

- Eligible scheme vehicles in excess of the GHMS allowable mass limit will incur a strike as per the 3 strike policy and be banned from site for the remainder of harvest
- Eligible scheme vehicles that fall into the 1 strike area as detailed below will be issued 1 strike and banned from site for remainder of harvest

Vehicles not eligible for the GHMS will be treated as follows. It is important to remember that any vehicle in excess of the operating mass limit at GML, CML or HML as outlined below are overloaded and in breach of the law. Grainflow provides details of all truck deliveries as part of the GHMS to RMS NSW.

File Name	Management of overloaded trucks for 15/ 16 harvest				File Location	RCI – QMS	Approved By	Grain Training and Efficiency Lead	
Document #	203.51A	Revision	3	Created	Sept 2015	Last Revised	March 2016	Reviewed By	Grain Training and Efficiency Lead

- **GML:** Vehicles that are <5% will be issued a notice advising the transport operator they are over their GML. Any delivery > 5% to <10% over their GML will be issued with 3 strikes and anything >10% will be issued with 1 strike and banned for the balance of the harvest.
- **CML:** Vehicles that are <3% will be issued a notice advising the transport operator they are over their CML. Any delivery > 3% to <8% over the CML will be managed via 3 strikes and anything > 8% will be issued with 1 strike and banned for the balance of the harvest.
- **HML:** Vehicles that are <1% will be issued a notice advising the transport operator they are over their HML. Any delivery >1% to <5% will be managed via 3 strikes and anything >5% will receive 1 strike and will be banned for the balance of the harvest.

Summary

It is crucial to understand that our primary purpose in each state is to manage safety and compliance under the National Chain of Responsibility legislation. We must maintain records that are accurate and transparent and take every opportunity to deter people involved in the supply chain not to overload vehicles.

The GHMS eligible vehicle chart is also available on the Grainflow website and should be referred to when determining legal vehicle load limits
